

## Capstan Rollers

*..High performance  
for Otari/Mitsubishi  
Analog & Digital  
tape recorders.*

**T/REDS™**  
**Ultimate Tape Drivers**

T/REDS capstan and idler rollers are designed to directly replace and outperform all other rollers made for the MTR-90 and similar machines, including those manufactured by Otari and Athan Corp.

T/REDS are manufactured by us - not for us! They are made from all new materials (not recycled cores) and machined to precise tolerances to insure accurate speed and very low flutter. The bore of the hard black anodized core is "roller bur-nished" to insure a smooth, exacting fit over existing shafts. The hub is covered with a proprietary, high coefficient of friction thermoplastic elastomer uniquely designed for the task of moving tape.

Each T/RED is *individually* tested for speed accuracy and flutter performance and then serialized before packaging.

Well into the 2nd generation, the newest T/REDS are highly acclaimed. The slightly softer, more compliant material exhibits superior durability and is better able to cope with the demands of high wind speeds and stiffer high output tapes.

The all too frequent problem of gooey "roller melt-down" is not an issue with T/REDS. Unlike polyurethane elastomers, our unique traction material is highly resistant to attack by common chemicals

In addition to a sample of our recommended *Head, Red & Roll Cleaner*, T/REDS are provided with a free pair of our "Improved Swing-Arm Return Springs" - a very important addition!

When properly installed and routinely maintained they will operate with virtually no slip and have proven to be extremely durable. After installing T/REDS, and following included guidelines for enhanced performance, we are so confident that you will see a marked improvement in the overall performance of your tape recorder, that we offer an unconditional 30 day money back guarantee!
